

Hush

Low Noise Rangehoods

INSTALLATION

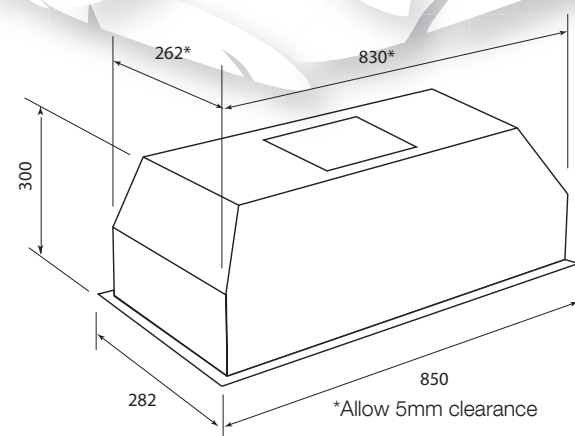

We designed the HUSH rangehoods to transfer minimum noise into the kitchen. When there is a roof space into which the fan motor can be located the installation is no more difficult than a conventional rangehood. HUSH rangehoods also install easily as a replacement for existing rangehoods. Using the roof space location for the fan motor means there is no need to climb outside onto the roof and there is no fan noise transferred to neighbours.

MODEL:	EMHUSH90C
Size:	90cm wide
Controls:	3 speed fan, electronic touch control
Airflow:	1200 cubic metres per hour
Motor:	Twin fan offboard for roof space installation
Filters:	Stainless steel baffle plus mesh filters also supplied
Ducting:	150 mm diameter
Inclusions:	All fittings, flexible ducting 2 x 2.5m, 3 optional mesh filters
Not included:	Duct tape and external vent

Optional mesh filters included.

MODEL:	EMHUSH85U
Size:	85cm wide
Controls:	3 speed fan, electronic touch control
Airflow:	1200 cubic metres per hour
Motor:	Twin fan offboard for roof space installation
Filters:	2 x Stainless steel baffle commercial style filters
Ducting:	150 mm diameter
Inclusions:	All fittings, flexible ducting 2 x 2.5m, Grease reservoir
Not included:	Duct tape and external vent

Low Noise Rangehoods

OFFBOARD FAN MOTOR SOLUTION

Australian homes are designed for open plan living and spending time together as a family. HUSH Rangehoods exhaust cooking smells and air borne residues without adding noise. They are strong, quiet and powerful. The twin fan motor installs in the roof space. If your home has a roof space or ceiling cavity then a HUSH rangehood with off board fan motor is the rangehood for you.

There are two HUSH models:

The classic stainless steel low profile 90cm canopy EMHUSH90C and the superb new EMHUSH85U under cupboard model with commercial style stainless steel baffle filters. Both of these rangehoods install over cook-tops up to a metre wide and in the future new 60cm HUSH models will be introduced into the range.

Roof Space Installation

The fan motor is located in the roof space. The rangehood exhausts out either through an existing vent in the roof or a new vent is installed.

Installation tools

All fittings are supplied including the flexible ducting. All that's needed is some expertise, tools and duct tape. The external vent is not supplied.

Powerful Exhaust

HUSH rangehoods have a powerful maximum extraction rate of 1200 cubic metres per hour. Three speeds to choose from.

LED Lighting

3 x LED lights illuminate the cooking surface. The super low total electrical consumption of only 6W makes HUSH an efficient night light.

Stainless Steel Baffle Filters

Easy clean efficient filters that are ideal for use over induction or gas cooktops. The EMHUSH90C also comes with optional mesh filters.

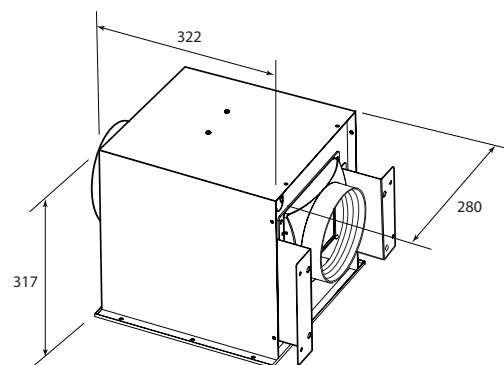

Peace of Mind

Covered by a full 2 Year Warranty and a national service network to make sure there is always a service agent when you need one.

Full installation kit supplied. Flexible ducting included in 2 x 2.5 metre lengths. We don't supply the duct tape or the external vent if required.

The twin fan motor assembly installs into the roof space above the kitchen. It simply plugs into a cable from the rangehood.

EMHUSH90C - 90cm Low profile stainless steel canopy

This is a classic contemporary design low profile canopy rangehood. It is assembled with stainless steel baffle filters and for cooks who prefer to use aluminium mesh filters, those filters are also included in the package. There are 3 fan speeds with electronic touch control buttons and indicator lights. The top speed extracts 1200 cubic metres of air per hour which is capable of removing all cooking odours from the home.

Maximum Extraction - Minimum Noise

EMHUSH85U - 85cm Under Cupboard Rangehood

Designed to be installed under a cupboard, out of sight, the 85cm dimension is ideal for installation over a 90cm cooktop. The thick commercial style stainless steel baffle filters capture excess moisture out of the air and collect in a separate reservoir. When installed this rangehood is essentially silent, even though it has a 1200 cubic metre per hour air extraction rate.
